

INCREMENTAL MODEL

- We have divided our requirements in two modules:
 1. Functions for Mentors and Students
 2. Resources section available to the Students
- Both the modules will be completed in three phases(Design, Testing and Implementation) each, incrementally one after the other.
- We chose the incremental model because:
 1. Requirements are already known.
 2. More than one module to be developed.
 3. Priority requirements could be developed well in time.
- Advantages of Incremental model
 1. It is a flexible model.
 2. Important functionalities are developed at an early stage.
